# Table of Contents

Git . . . . .	1
Raspberry Pi . . . . .	1
SSH . . . . .	2
Network Manager . . . . .	2

## Git

- Drop all stashed at once

```
git stash clear
```

- Show the *files* in the most recent stash

```
git stash show
```

- Drop the most recent stash

```
git stash drop
```

- List all stashes

```
git stash list
```

- Show the *changes* of the most recent stash

```
git stash show -p
```

## Raspberry Pi

- Show IP address

```
ifconfig wlan0 | grep 'inet ' | awk '{print $2}'
```

- Sync system clock

```
sudo timedatectl set-ntp true && date
```

- Check voltage

```
vcgencmd get_throttled | grep -q throttled=0x50005 && echo "Low voltage detected! Please  
↪ use official power supply." || echo "Power requirement satisfied."
```

## SSH

- Print the public SSH key, which can be used for authentication on remote servers

```
cat ~/.ssh/id_rsa.pub
```

- Validate SSH

```
ssh -T git@github.com
```

- Generate SSH key

```
ssh-keygen
```

## Network Manager

- Connect to a WiFi network

```
nmcli dev wifi connect SSID password PASSWORD
```

- Display a list of all saved network connections on the system

```
nmcli con show
```

- List all available Wi-Fi networks detected by the system

```
nmcli dev wifi list
```

- Show the status of all network interfaces, including their connection states

```
nmcli dev status
```
